

As part of their strategic focus on S/4HANA, SAP will end support on December 31, 2024 for many applications that rely on the NetWeaver Java stack, including SAP Business Process Automation by Redwood. That also means that no updates or new features for SAP BPA can be released.

For enterprises using SAP BPA, this means that **critical processes could end up running on unsupported software**. Fortunately, there is an easy answer that will keep everything running reliably as it does today. Even better, you will unlock new automation possibilities and a higher level of collaboration and support. Seamlessly move your SAP BPA jobs into the latest, future-ready version of the same technology: RunMyJobs.

Unlock New SAP Automation

Automate SAP
Integrated Business
Planning and data
integration with SAP's
Business Technology
Platform

Orchestrate data management with Informatica, Apache Airflow, Azure Data Factory, and many more

Deliver more self services using forms, business user interactions, and automated email processing

Bring cloud storage into workflows with Amazon S3, Azure Storage, Google Storage, and more

What You Gain by Moving to RunMyJobs

- Unlimited connections and the broadest set of integration capabilities—on-prem, cloud or both
- Unrivaled SAP integration into existing and new SAP solutions, including SAP Integrated Business Planning and SAP Business Technology Platform
- Expanded visibility and reliability of your critical business processes with enhanced monitoring, alerting, and SLA
- Best-in-class support and expert guidance direct from Redwood, every step of the way
- Proven reliability and simplicity with SaaS so you can focus on innovation and high-value initiatives

A Worry-Free, Seamless Move

01.

Moving SAP BPA to RunMyJobs is a simple, seamless process. Because both are Redwood solutions and use the same core technology, the move is as easy as a service pack update—with no changes to your current processes.

02.

Preparation

- BPA Assessment
- Setup authentication
- · Preparation scripts

Non Production

- Development
- Test
- Sandbox

03.

Enablement and validation

- · Delta Training
- Validation
- Go-Live Approval

Production

- Production
- Monitor & hypercore

2 weeks

04.

Redwood helps enterprises excel in the digital age with a proven migration path to our cloud-native workload automation platform. We combine decades of inhouse Professional Services experience with automated migration and testing tools into a proven methodology. Our goal is to minimize time, effort, and risk — so you gain the benefits of Redwood's workload automation and orchestration rapidly and painlessly.
